

# TOUCHSTONE NEW ENERGY

Smart Energy for a Smarter World

## TOP NEWS OF THE TOUCHSTONE NEW ENERGY PLATFORM

### UP STREAM OF NEW ENERGY

### >>> MINE RESOURCES

upstream mining in the context of new energy involves not only the traditional extraction of resources but also a shift towards sustainable practices and technologies to meet the evolving demands of the energy sector.

### ELECTRONIC CARS & STORAGE

the middle stream of the energy sector for electricity cars and storage encompasses the generation, distribution, and storage of electricity, with a focus on sustainability, efficiency, and the integration of emerging technologies to support the transition to a cleaner and more electrified transportation system.

### MIDDLE STREAM OF NEW ENERGY

# DOWN STREAM OF NEW ENERGY

## ➤➤➤ REFINING, DISTRIBUTING, AND CONSUMING

the downstream sector of new energy encompasses a range of activities aimed at refining, distributing, and consuming renewable energy products in a sustainable and efficient manner, while also addressing challenges such as grid integration, energy storage, and waste management. and also include high tech linked products .

## HOW THE TOUCHSTONE NEW ENERGY PLATFORM WORKS

## ➤➤➤ CONSOLIDATED PLATFORM

The Touchstone New Energy Platform is a financial vehicle designed to consolidate cash flows from various sources into a listed company. These funds are then injected into energy projects over a 2 to 3-year period to facilitate their development. The ultimate goal is for these projects to generate cash flow, which is reinvested into the platform to support the expansion of the project portfolio. Each project is structured to mitigate risks effectively, ensuring maximum returns for stakeholders. Overall, the platform aims to accelerate the growth of the new energy sector while managing risks and maximizing financial performance.

## RECEIVABLES

### ➤➤➤ CASH FLOW ENGINE

By leveraging existing receivables as collateral to kick off the platform, Touchstone can efficiently deploy capital into the energy sector, accelerate the development of new energy projects, and create value for investors while contributing to the transition to clean and sustainable energy sources.

### ➤➤➤ SECURED AND GUARANTEED MINING DEVELOPMENT

Utilizing existing receivables and product guarantees as collateral enables mining companies to secure financing for development projects. These assets are evaluated for value and reliability to attract lenders or investors. Secured financing supports exploration, extraction, and processing activities. Revenue from product sales is used to repay financing, mitigating risk for lenders and facilitating industry growth.

## ELECTRONIC CAR

The platform plans to collaborate with leading car manufacturers in China and globally to promote cars in the global market, especially in Greater China. They intend to offer financial support for car promotion, allowing clients to obtain cars for daily use at zero cost. This strategy aims to incentivize car adoption and drive market penetration while providing financial assistance to potential buyers.

### ➤➤➤ SPEICAL ARRANGEMENT

The platform aims to utilize cars as financial instruments to support the development of local social and country resources in certain countries. By providing cars through innovative financial arrangements such as leasing or financing, they intend to facilitate transportation infrastructure development and enhance mobility for local populations. This strategy seeks to stimulate economic growth, improve access to essential services, and empower communities in targeted regions.
