

A Unique Global *Ecosystem Platform*

Integrating governments, strategic industries, institutional capital,
and global corporations into a single development model —
building complete national economies, not isolated projects.

Not a financier. *An ecosystem integrator.*

Touchstone Capital Partners is not a traditional investment bank, private equity firm, infrastructure developer, or advisory company. Most firms occupy one part of the value chain — banks arrange financing, equity firms provide capital, engineers build, insurers manage risk, and traders secure offtake. Each is a separate organisation a government must coordinate alone.

Touchstone brings every one of these capabilities together inside a single platform, cutting execution risk, improving efficiency, and accelerating delivery from concept to completion.

The conventional model

Five or more counterparties — bank, sponsor, EPC contractor, insurer, trader — each negotiated separately, each a point of delay.

The Touchstone model

One coordinated platform holding financing, construction, risk, and offtake relationships under a single roadmap.

The outcome

Faster bankability, lower financing cost, and a single point of accountability for governments and investors alike.

One concession, *developed as a full value chain.*

Touchstone starts with sovereign advantages a country already holds — resources, land, ports, corridors, regulation, demand, and people — and develops the entire chain around them, rather than financing a single standalone asset.

Confidence is *engineered in*, not hoped for.

A proprietary risk mitigation framework — insurance wraps, bank guarantees, performance bonds, long-term offtake agreements, and partnerships with globally recognised corporations — makes projects bankable from day one and lowers financing costs across the stack.

TRADITIONAL

Equity & debt financing

The base layer, structured for long-term project economics.

PUBLIC MARKETS

Capital market listings

Routes to public liquidity once a project reaches scale.

PRIVATE CREDIT

Infrastructure funds & private credit

Patient capital matched to long-duration national assets.

DIGITAL

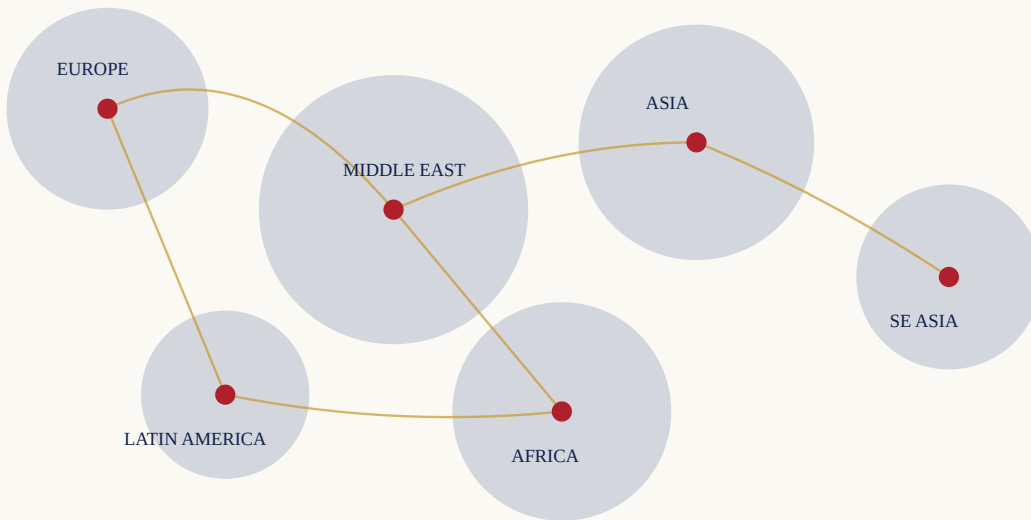

Real-world asset tokenisation

Digital financial solutions that widen the investor base.

Governments contribute land, licences, concessions, and policy support. Touchstone mobilises sovereign wealth funds, pension funds, commercial banks, export credit agencies, development finance institutions, engineering firms, and technology providers — delivering scale no single organisation could reach alone.

One model, *replicated by local context.*

The platform operates globally while staying locally adaptable — each ecosystem tailored to a government's existing strengths, development priorities, and regulatory environment.

IN SUMMARY

Not a transaction. *A national platform.*

What makes Touchstone unique isn't any single capability — it's the integration of government partnerships, strategic industries, institutional capital, engineering expertise, risk mitigation, technology, and global capital markets within one coordinated platform, built to generate employment, industrialisation, foreign direct investment, export growth, fiscal revenues, and long-term national prosperity.
